Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/536,953

Applicant(s)

BURTON ET AL.

Examiner/Venkataraman
Balasubramanian/**Art Unit**

1624

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 May 2009.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 18-21, 23, 25 and 27-35 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 18-21, 23, 25 and 27-35 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

DETAILED ACTION

Applicants' response, which included cancellation of claim 22 and amendment to claims 18, 19, 25, and 27-29 are made of record. Claims 18-21, 23, 25 and 27-35 are now pending. In view of applicants' response, the 112 first and second paragraph rejections made in the previous office action have been obviated. However, the following prior art rejections made in the previous office action are maintained.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 18-21, 23, 25 and 27-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lowik et al., WO 01/42228 for reasons of record. To repeat:

Lowik et al., teaches several triazines compounds and their use as affinity ligands on solid supports. Ser pages 1-3 for description of the invention and Schemes 1-8 for various triazines made and attached to solid support. See pages 4-8 for examples 1-5 and pages 8-19 for compounds 1-53b. Especially see example 2 and various examples in Schemes (Figures 3a, 3b, 6 and 7).

Lowik et al., differs in not exemplifying compounds with diamine¹ as linker as required by instant X. But Lowik et al., includes besides exemplified piperazine, diamine as a choice. See page 4, line 4. Thus, Lowik et al., teaches use of various linker including piperazine as equivalent as linker. Hence, it would be obvious to one trained in the art to use polymer bound triazine compounds with various linker including diamine positively recited therein for affinity chromatography of proteins in view of the equivalency teaching outlined above.

This rejection is same as made in the previous office action but now excludes cancelled claim 22. Applicants' traversal to overcome this rejection is not persuasive. Applicants have argued that Lowik teaches only macromolecular compounds as affinity ligands while instant claims relates to small molecules as affinity ligand. This argument is not persuasive.

Contrary to applicants' urging, Lowik teaches small molecule ligands as well. See entire document, especially see Scheme I, left column wherein Lowik teaches non-macrocydic compounds. See Scheme 6.

The thrust of current traversal is that the Lowik teaches small molecule ligands as seen Scheme I but they are for further to make macrocycles. This was not found persuasive. First of all, as conceded by applicants, Lowik teaches small molecule ligands which include instant compounds. Hence, the rejection of compound claims as per applicants' admittance, is proper. Secondly, Lowik teaches the macrocyclic cores are useful as affinity ligands, one trained in the art would be motivated to make the compounds shown in above said Schemes and study them as affinity ligands. In addition, the various references cited in the International Search report and IDS clearly indicate the linear triazines are also useful as affinity ligands. one trained in the art would be motivated to make the compounds shown in above said Schemes and expect them to be affinity ligands.

Hence, this rejection is proper and is maintained.

Claims 18-21, 23, 25 and 27-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over of Lowik et al., WO 01/42228 and Atkinson et al., GB 2053 926.

Teachings of Lowik et al., as discussed above are incorporated herein. As noted above, Lowik et al., teach several triazines compounds and their attachment to various support materials. Lowik et al., also teaches several triazines bound matrix for affinity chromatography and Atkinson et al., teaches use of several triazines for affinity chromatography.

Atkinson et al., teaches various triazine compounds useful as affinity chromatography materials attached to a solid support. See page 1-2, especially page 2, lines 40-45. See table 1, Note Procion Red HE-3b is taught as ligand for attachment to solid support.

These two references teach equivalency of the various triazines and their bound form for affinity chromatography. Thus, it would be obvious to one trained in the art to use polymer bound triazine compounds for affinity chromatography of proteins in view of the equivalency teaching outlined above. See *In re KSR International vs Teleflex Inc.*, 82 USPQ2d 13-85, 1397 (2007) wherein the court stated that

[w]hen there is a design need or market pressure to solve a problem and there are a finite number of identified, predictable solutions, a person of ordinary skill has good reason to pursue the known options within his or her technical grasp. If this leads to the anticipated success, it is likely the product not of innovation but of ordinary skill and common sense.

Such is the case with instant claims. Instant claims include choices of X which are generically taught in the references cited above. It would be obvious to one trained in that that in view of the equivalency of these linker to modify such linker and arrive the triazines as affinity ligands linked to a matrix.

This rejection is same as made in the previous office action but now excludes cancelled claim 22. Applicants' traversal to overcome this rejection is not persuasive. Applicants have argued that Lowik teaches only macromolecular compounds as affinity

ligands while instant claims relates to small molecules as affinity ligand. This argument is not persuasive.

Contrary to applicants' urging, Lowik teaches small molecule ligands as well. See entire document, especially see Scheme I, left column wherein Lowik teaches non-macrocyclic compounds. See Scheme 6.

The thrust of current traversal is that the Lowik teaches small molecule ligands as seen Scheme I but they are for further to make macrocycles. This was not found persuasive. First of all, as conceded by applicants, Lowik teaches small molecule ligands which include instant compounds. Hence, the rejection of compound claims as per applicants' admittance, is proper. Secondly, Lowik teaches the macrocyclic cores are useful as affinity ligands, one trained in the art would be motivated to make the compounds shown in above said Schemes and study them as affinity ligands. In addition, the various references cited in the International Search report and IDS clearly indicate the linear triazines are also useful as affinity ligands. one trained in the art would be motivated to make the compounds shown in above said Schemes and expect them to be affinity ligands.

As for Atkinson, in Table 1, compound 1, when $n=3$, the compounds taught by Atkinson would include instant compounds.

Thus, based on the combined teaching of Lowik and Atkinson and the guidance provided therein, it would be obvious to one trained in the art to make matrix bound triazines bearing various amino groups as affinity ligands for proteins and expect them to have the use for protein separation, purification etc.

Hence, this rejection is proper and is maintained.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication from the examiner should be addressed to Venkataraman Balasubramanian (Bala) whose telephone number is (571) 272-0662. The examiner can normally be reached on Monday through Thursday from 8.00 AM to 6.00 PM. The Supervisory Patent Examiner (SPE) of the art unit 1624 is James O. Wilson, whose telephone number is 571-272-0661. The fax phone number for the organization where this application or proceeding is assigned (571) 273-8300. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published

applications may be obtained from either Private PAIR or Public PAG. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-2 17-9197 (toll-free).
